

Is Your Car Making Your Allergies Worse?

The atmosphere is filled with **pollen, mold spores, dust** and **smog** that are drawn inside vehicles through vehicle's air conditioning and ventilation systems.

Your vehicle's Cabin Filter is there to **filter the air** coming in, **remove allergens, dust, smog** and **pollen**. That's why it should be replaced regularly, to help **you and your passengers stay more comfortable!**

Cabin filters should **NOT** be **cleaned and reinstalled**.

Instead, they should be replaced every 12,000 to 15,000 miles, or once a year per the owner's manual.

Our automotive service technicians can help locate the cabin filter, check it and replace it according to the vehicle's owner manual.

We'll inspect your **cabin filter** at **NO charge** (it usually takes about 10 minutes to check)

Stop in or give us a call **NOW!**

Autosys -- 425-882-0630

*"A dirty or clogged cabin air filter can cause **contaminants** to become so concentrated in the cabin that **passengers actually breathe in more fumes and particles when riding in the car** than when walking down the street," said **Rich White**, executive director, Car Care Council. "With allergy season here, **replacing the cabin air filter** is a simple way for you and your passengers to **breathe easier while driving.**"*
